Project Description

GameCheck is a web-based application designed to help users track and analyze board game and card game sessions. During casual game nights, players often forget which games were played, who participated, and who won each round. Over time, this information is lost, making it difficult to track performance, identify favorite games, or revisit memorable sessions.
GameCheck addresses this problem by providing a simple and intuitive platform where users can maintain a personal game library, log game sessions, and explore aggregated statistics such as win rates, most-played games, and player performance trends. By replacing informal tracking methods like memory or spreadsheets, GameCheck creates a structured and persistent digital record of game activities for individuals and groups.

User Personas

Casual Host – Alex

Alex regularly organizes game nights with friends. Currently, Alex relies on memory or informal notes to keep track of which games were played and who won. Alex needs a simple and efficient way to log sessions and maintain a reliable history without managing spreadsheets.

Competitive Player – Jordan

Jordan enjoys analyzing performance and comparing results with friends. Jordan is interested in statistics such as win rates, win streaks, and head-to-head records. Jordan needs a system that automatically calculates and presents these metrics to support friendly competition.

Game Collector – Taylor

Taylor owns a large collection of board games and wants to understand which games are played most often and how different groups interact with them. Taylor is interested in usage patterns and trends to better evaluate their game collection.

User Stories

Game Library & Session Logging (Xuyang Shen)

As a user, I want to add games to my personal game library with fields such as name, category, player count, and description, so that I can maintain an organized record of all games I own or play.

As a user, I want to edit or delete games in my library, so that my game list remains accurate and up to date.

As a user, I want to create a new game session by selecting a game, specifying players, and recording the date and winner, so that each game night session is properly documented.

As a user, I want to edit or delete a session entry, so that I can correct mistakes and ensure the session history remains accurate.

As a user, I want to browse past sessions sorted by date or game name, so that I can quickly review previous game activities.

Player Statistics & History (Gaoyuan Shi)

As a user, I want the system to automatically calculate win rates for each player, so that I can easily evaluate performance over time.

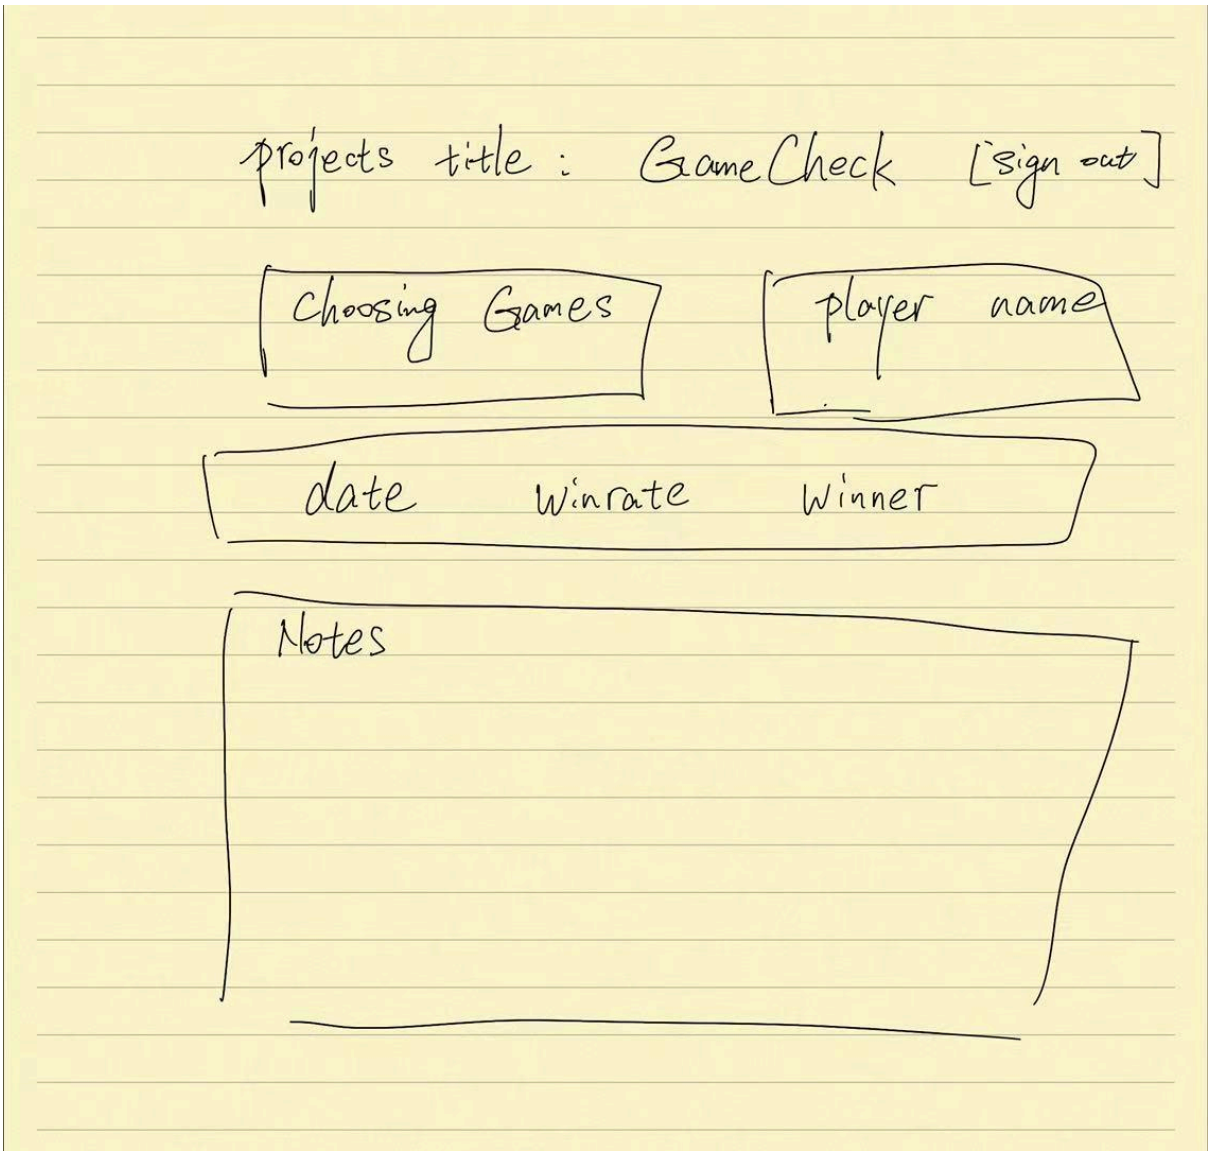
As a user, I want to view statistics such as most-played games and player win streaks, so that I can analyze trends across sessions.

As a user, I want to filter session history by player or game, so that I can quickly locate specific records.

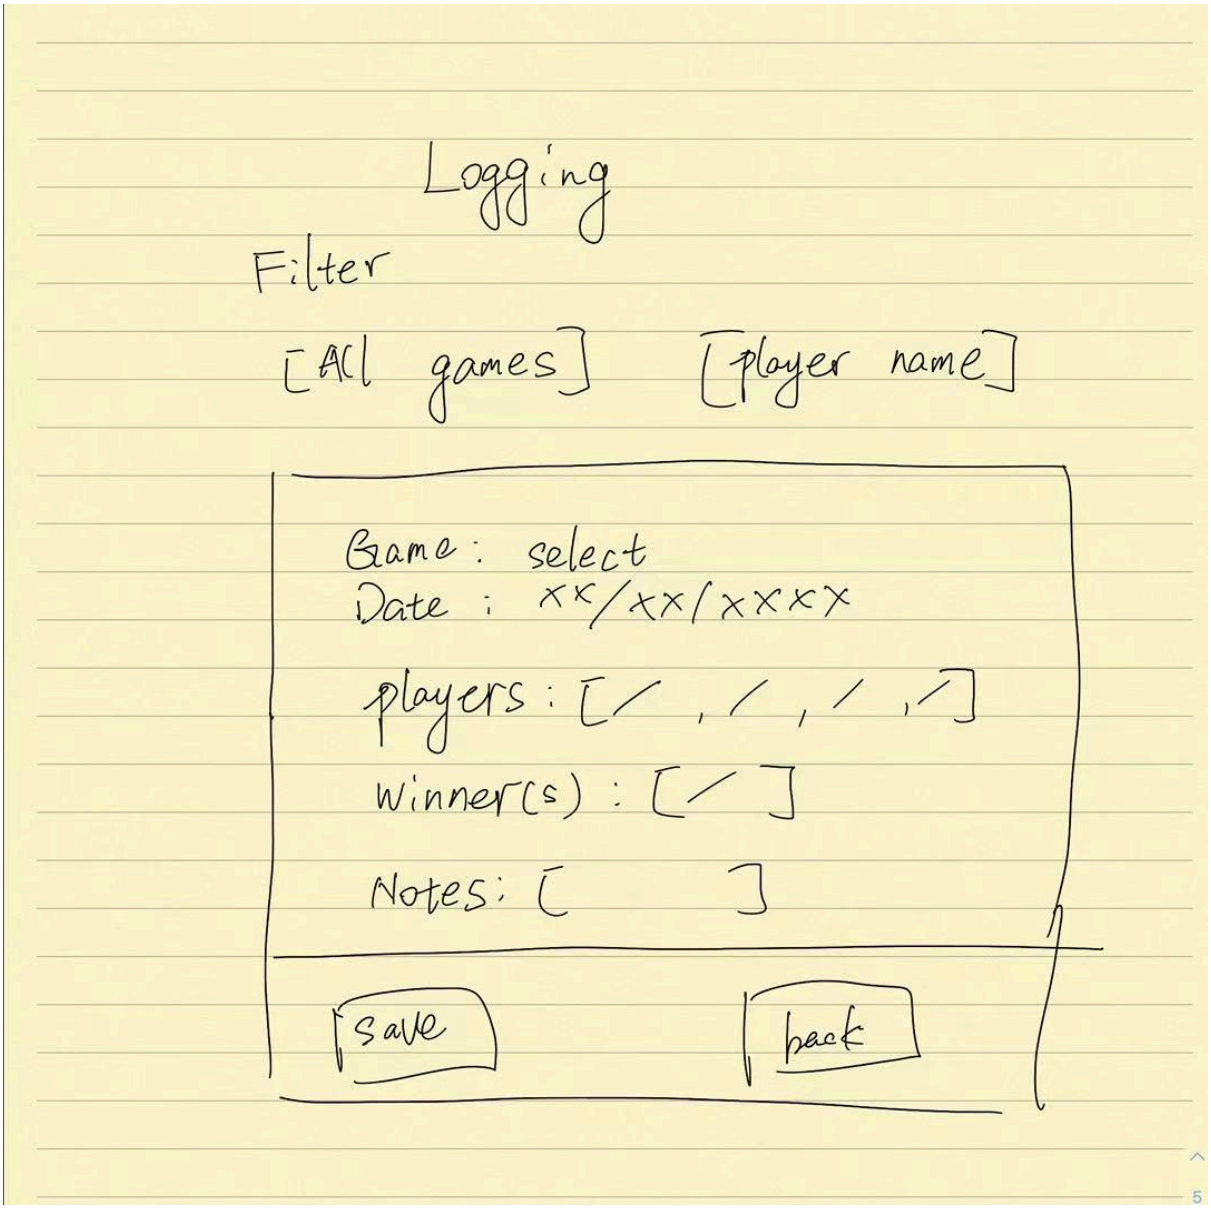
As a user, I want to view head-to-head records between players, so that I can track comparisons and rivalries.

As a user, I want to view a dashboard summarizing total sessions, most active players, and top games, so that I can quickly understand overall group activity.

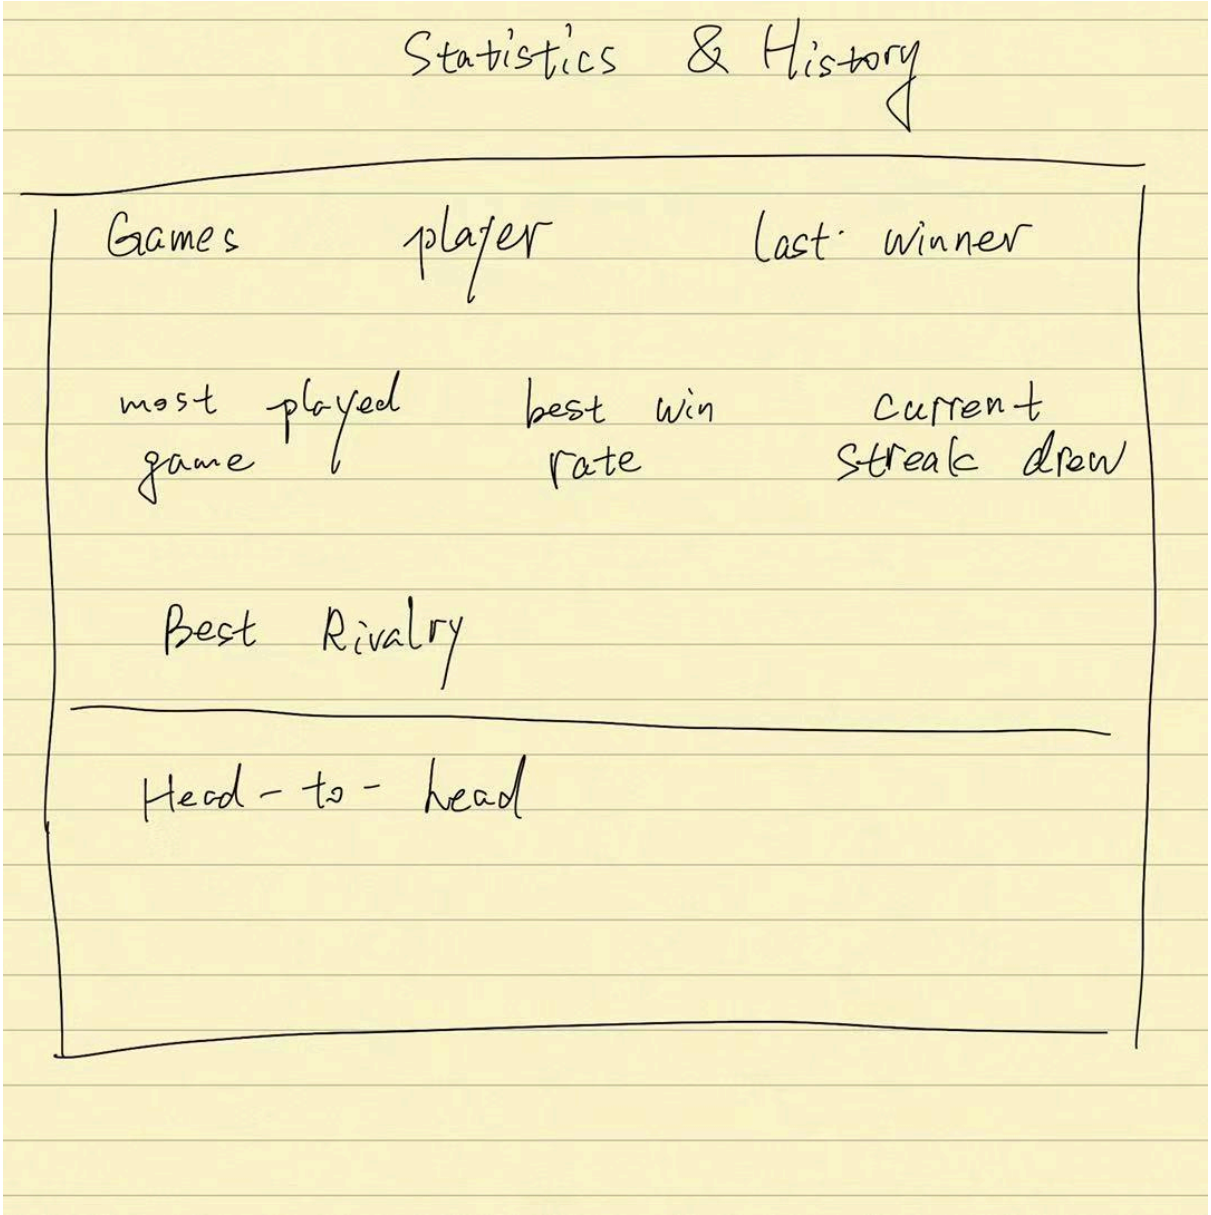
mockups



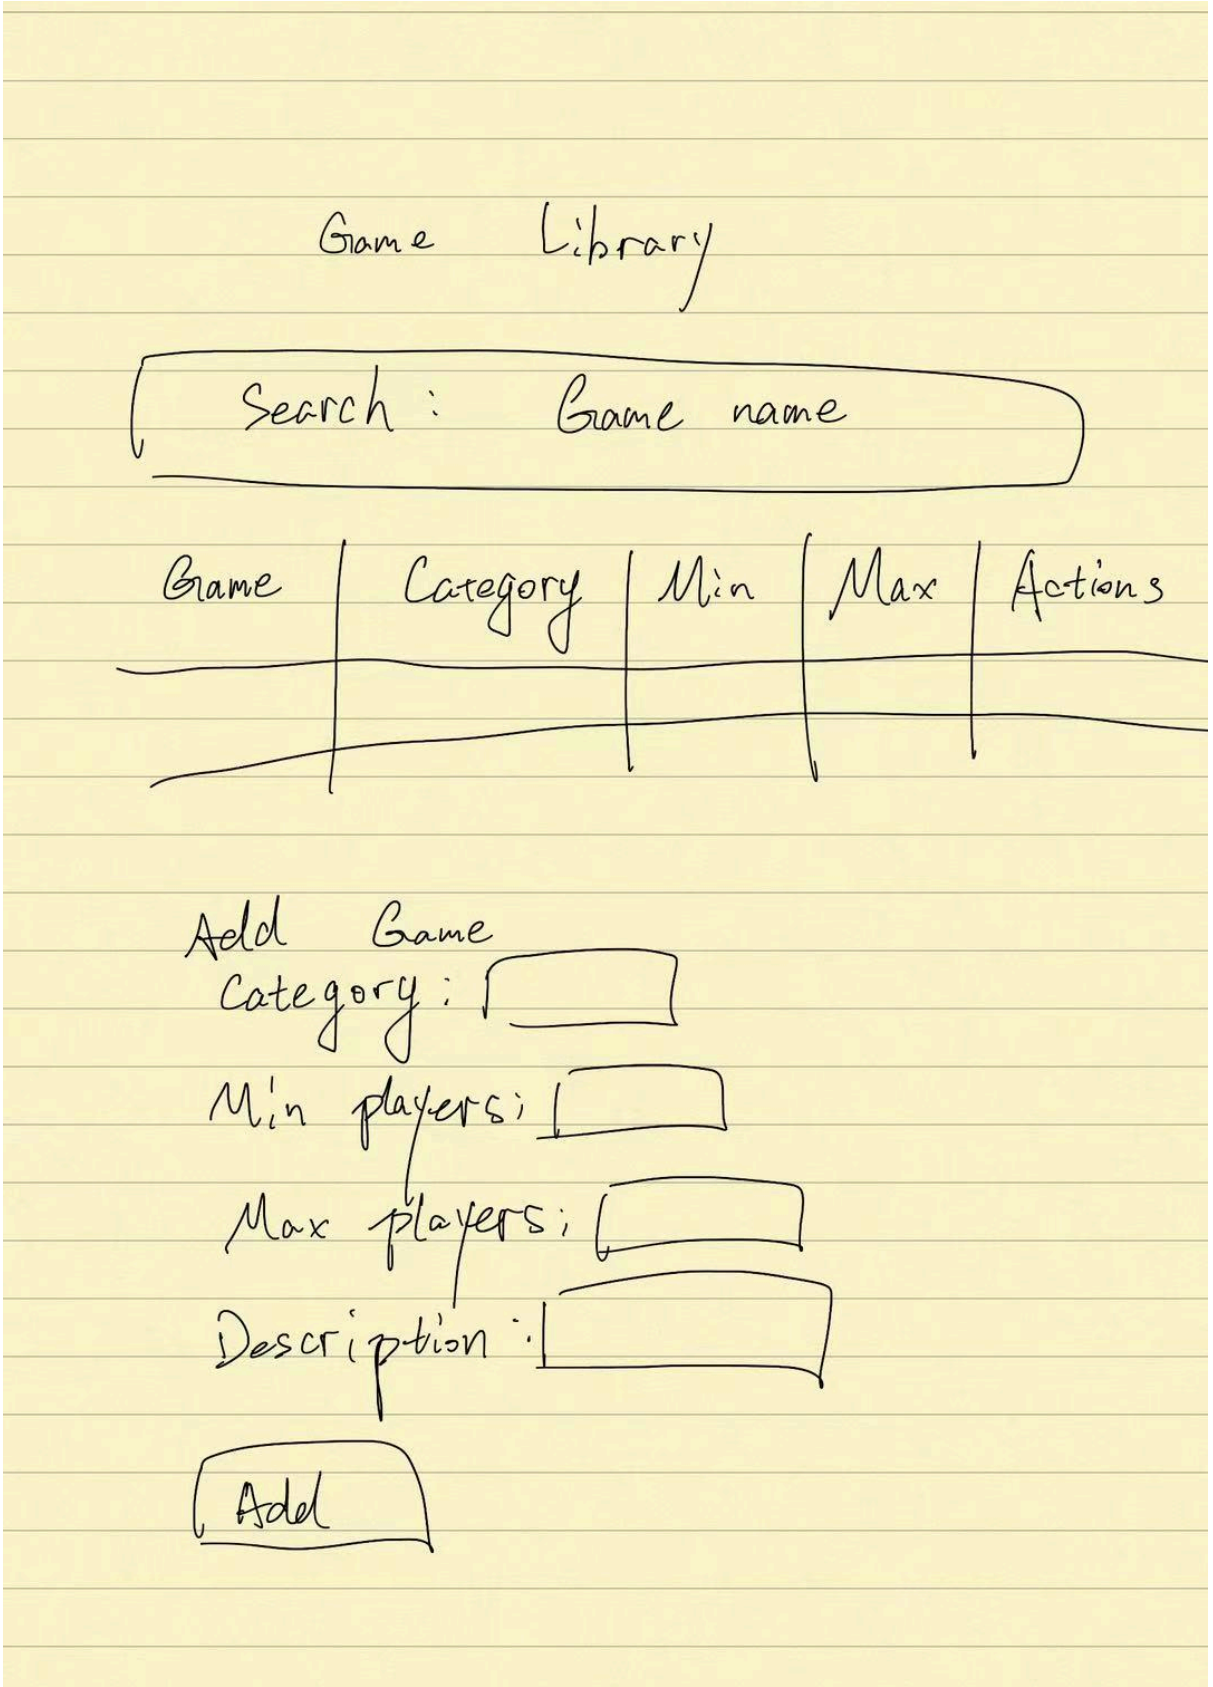
This page provides an overview of key statistics including total sessions, players, and recent activity.



This page allows users to log game sessions by selecting a game, entering players, and recording results.



This page displays aggregated statistics such as win rates, streaks, and player comparisons.



This page allows users to manage their game collection, including adding, editing, and searching games.
